

GRAPHICS CALCULATOR PROGRAM: EQUATION

This program can be used to solve one- variable linear equations. After you provide the left- hand side of the equation you must press ENTER. The program then prompts for the right- hand side to be entered. The answer is given as a decimal and as a fraction. Pressing ENTER gives an option to try a new equation or to quit the program.

Example:

```
ENTER LHS OF EQN
5(2X-3)■
```

```
ENTER RHS OF EQN
5(2X-3)= ■
```

```
ENTER RHS OF EQN
5(2X-3)= 5-X■
```

```
5(2X-3)=5-X
X=1.818181818
 = 20/11
```

```
PLEASE CHOOSE
1: NEW EQUATION
2: QUIT
```
